ABSTRACT

PROBLEM TO BE SOLVED: To provide a **shaft** -sealing structure, capable of achieving long service life of a **lip** seal, while ensuring superior sealing performance in a vacuum pump.

SOLUTION: **Lip** seals 45, 46, 45A, 46A are mounted on the peripheral **faces** of rotary **shafts** 19, 20, respectively located between **radial** bearings 37, 38 and rotors 27, 32. A rubber **lip** ring 452 of the **lip** seals 45, 45A is mounted on a gear accommodating chamber 331 side. A fluororesin **lip** ring 463 of the **lip** seals 46, 46A is mounted on the pump room 43 side. Backing pressure chambers 49, 50 between the rubber **lip** ring 452 and the fluororesin **lip** ring 463 communicates with the gear accommodating room 331 via ventilation passages 51, 52.
